

ATLANTA, GA DEKALB COUNTY LANDFILL

Solar Powered SG Mobile™ System Demonstration Introduced

OVERVIEW

A solar-powered SG Mobile™ system was introduced to over 500 attendees of the US Composting Council's "Demo Days" in Atlanta at the DeKalb County Landfill. USCC's "Demo Days", following the annual national conference, is the largest equipment demonstration event for the composting industry in the United States.

Participants learned, first-hand, how solar power runs SG's technology and why it is an easy, viable solution for areas where there is no electricity.

The use of landfills as a good location for establishing organic waste composting processing is increasing and electricity is frequently an obstacle.
